

 CLEAR

A fully user-side image search engine.

Press to Select File

 Highlights

- Flickr does not provide an official similar image search engine nor corresponding API. Nevertheless, CLEAR realizes it on a user-side.
- CLEAR runs totally on a client side. It does not use a backend server at all.
- CLEAR does not store any images nor build search indices, while traditional search systems require to build search indices.

 Tips

- CLEAR is good at images with an explicit object class, e.g., dog, cat, and bird, due to the backbone image feature extractor.
- CLEAR is NOT good at portrait images due to the backbone image feature extractor.
